

Pharmacy Specialty Drug List

Specialty drugs are biologics or medications which typically require additional management for complex, chronic, or serious conditions. The use of specialty drugs may also involve some or all the following circumstances: intensive clinical monitoring, specific patient training or compliance assistance, unique handling, storage or preparation, and/or special administration by the patient or a healthcare professional. In addition, these medications may have a limited distribution network and/or a high total cost. The use of a specialty medication usually requires careful management from health care providers to watch for side effects and confirm that the medication is working as planned.

Your prescription medication plan may provide coverage of the following listed Specialty medications. Treatment recommendations may vary. Please call your doctor or pharmacist if you have questions about your health or medication. Other rules, limits and exclusions may apply. Please contact the Member Services phone number on your prescription card to learn more about your coverage.

The medications listed below are grouped into general therapeutic categories which includes an alphabetical list of drugs.
